Target:

```
-- TO introduce accuracy we want the model to train on more difficult data. So we are introducing image augmentation in this step
```

Results:

```
-- Parameters: 9,907
-- Best Training Accuracy: 97.92
-- Best Test Accuracy: 99.38
```

Analysis:

```
-- The accuracy has improved compared to previous step
-- The training accuracy is increasing but test accuracy is fluctuating a little. The model is not able to find the minu=ima. So, we
```
